Confirmation

Specify the type of application to add.

- ☐ Application with source files
Copy the source files for this application to the deployment share, which will be used for installing the application.
- ☐ Application without source files or elsewhere on the network.
Either no source files are required for this application, or the application exists at a separate UNC path (e.g. a DFS share).
- ☒ Application bundle.
Create a new application bundle. There is no installation command associated with this application. Instead, only the dependencies of this application will be installed. These dependencies can be configured after the item has been added.
